14. Frequently Asked Questions

1. Getting Started — Sign Up & Onboarding

1.1 What is EMARA Books?

EMARA Books is a cloud-based accounting and financial management platform designed for small and medium businesses, particularly in the UAE and GCC region. It helps you:

- Upload and automatically categorize bank statements
- Create and send professional invoices to customers
- Track bills and payments to vendors
- Reconcile your bank with your books
- Generate financial reports (P&L, Balance Sheet, Cash Flow)
- Detect financial risks and anomalies with AI
- Connect your Odoo ERP to sync data

1.2 How to Sign Up

Follow these steps to create your account:

1. Open your browser and go to **app.emarabooks.com**
2. Click the **"Sign Up"** tab on the login screen
3. Enter your **email address** and choose a **password** (minimum 6 characters)
4. Click **"Sign Up"** — you will receive a confirmation email
5. **Alternative:** Click the **"Sign in with Google"** button to use your Google account
6. After signing in for the first time, you will be taken to the **Onboarding** screen

Tip: Use the same Google account you use for business email — this makes it easier to remember and recover your account.

1.3 How to Complete Onboarding

Onboarding has two steps. You must complete both before you can use the app.

Step 1: Create Your Organization

An "Organization" is your accounting firm or parent company. If you manage books for multiple clients, they will all live under this organization.

1. Enter your **Organization Name** (e.g., "Al Saqr Accounting Firm" or "My Company")
2. Select your **Country** — this sets defaults for currency, tax, and date format
3. Choose your **Default Currency** (AED for UAE, USD for US, etc.)

4. Set the **VAT Rate** — UAE default is 5%. Enter 0 if you are VAT-exempt
5. Select your **Fiscal Year Start Month** — January for most UAE companies
6. Click "**Create Organization**"

Step 2: Create Your First Client

A "Client" represents a single business whose books you are managing. You can add more clients later.

1. Enter the **Client/Company Name** (e.g., "Akwad Tech LLC")
2. Select the client's **Currency** and **Country**
3. Choose the **Industry** — this helps with smart categorization (IT, Retail, F&B;, Healthcare, etc.)
4. Optionally enter **Trade License** number and **TRN** (Tax Registration Number)
5. Click "**Create Client**" — you will be taken to the Control Center

Why does industry matter? EMARA uses your industry to intelligently categorize income. For example, if you are an IT company, money from customers is categorized as "IT & Technology" revenue. If you are a restaurant, it becomes "Food & Beverage" revenue.

2. Navigating the App

2.1 The Sidebar Menu

The left sidebar is your main navigation. Click any item to go to that section:

Menu Item	What You Will Find There
Control Center	Your financial dashboard — risk scores, revenue, expenses, balance, alerts
Reconciliation	Match bank transactions to bills/invoices. Fix mismatches.
Revenue Integrity	Everything about money coming IN — invoices, customers, AR aging, collections
Expense Integrity	Everything about money going OUT — bills, vendors, AP aging, payments
Cash & Liquidity	Bank balances, cash flow charts, transaction ledger, all transactions
Financial Reports	P&L statement, Balance Sheet, Cash Flow statement, Financial Ratios
Integrations	Upload bank statements, connect Odoo ERP, view uploaded files
Risk Monitor	Risk alerts, anomaly detection, flagged items, data quality
Control Settings	Profile, Chart of Accounts, matching rules, thresholds, audit log

2.2 The Date Range Picker

At the top of most pages, you will see a date range selector (e.g., "Oct 1, 2025 – Mar 9, 2026"). This controls what data is displayed on that page.

How to change the date range:

1. Click the **date range bar** at the top of the page
2. Choose a **preset**: This Month, Last Month, This Quarter, This Year, Last 12 Months, All Time
3. Or click **"Custom"** and pick specific start and end dates
4. All charts, tables, and metrics on the page will update automatically

Tip: Use "All Time" when you want to see all your data. Use "This Month" for quick monthly reviews.

2.3 Switching Between Clients

If you manage multiple businesses, you can switch between them:

1. Click your **profile name** at the bottom-left of the sidebar
2. Select a different **client** from the dropdown
3. All data on every page will switch to the selected client

3. How to Upload a Bank Statement

3.1 Before You Start

You will need a bank statement file from your bank. EMARA accepts:

Format	File Extension	Best For
Excel	.xlsx or .xls	Most banks offer Excel downloads. Best quality parsing.
PDF	.pdf	If your bank only provides PDF statements. AI-assisted parsing.

How to get your bank statement: Log into your online banking portal → go to Statements or Account History → download the statement as Excel or PDF. Most UAE banks (ADCB, FAB, ENBD, Wio, Mashreq) support Excel export.

3.2 Step-by-Step Upload

- Click **"Integrations"** in the left sidebar
- Make sure you are on the **"Banks"** tab (it is selected by default)
- In the **"Upload Bank Statement"** area, either:
 - **Drag and drop** your file into the dotted area, OR
 - Click **"Select File"** and browse to your file
- Wait for the upload to complete (you will see a progress spinner)
- A **green toast** will appear showing: *"94 transactions saved for Wio Bank"*
- The file will appear under **"Uploaded Statements"** on the right

Tip: You can upload multiple statements (e.g., September, October, November). Each file creates a separate entry in the Uploaded Statements list.

3.3 What Happens Automatically After Upload

Once your file is uploaded, EMARA performs these steps automatically in the background:

Step	What Happens	Time
1. Parse	Reads every row, extracts date, description, amount, balance	1-3 seconds
2. Detect Bank	Identifies your bank (Wio, ADCB, FAB, etc.) and currency (AED)	Instant
3. Categorize	Assigns each transaction to a category (Food, Transport, Utilities, etc.)	1-2 seconds
4. Create Vendor	Each unique payee becomes a vendor (e.g., "Etisalat", "ADNOC")	1-2 seconds

Step	What Happens	Time
5. Create Bills	Each expense transaction becomes a paid bill	1-2 seconds
6. Create Invoices	Each income transaction becomes a paid invoice	1-2 seconds
7. Bank Accounts	Creates/updates your bank account record with balance	Instant
8. Risk Alerts	Flags large transactions, duplicates, and anomalies	1-2 seconds

After all steps complete, you will see a second toast: *"Sync complete: 45 vendors, 30 customers, 60 bills, 11 invoices, 5 alerts"*

3.4 How to Delete an Uploaded File

Warning: Deleting a file permanently removes it and ALL associated data — transactions, bills, invoices, vendors, and customers created from that file. This cannot be undone.

- 1. Go to **Integrations** → **Banks** tab
- 2. Find the file under **"Uploaded Statements"**
- 3. Click the **trash icon** (🗑️) next to the file
- 4. A confirmation dialog will appear — click **"Delete"** to confirm

4. Understanding Your Dashboard (Control Center)

4.1 What is the Control Center?

The Control Center is the first page you see after logging in. It gives you a complete overview of your financial health at a glance — like the cockpit of an airplane.

4.2 Understanding Each Metric Card

Card	What It Means	What To Do If Concerning
Basic Insight (0-100)	Your overall financial health score. 80-100 = Excellent 50-79 = Moderate Below 50 = High Risk	Click the score to see which factors are dragging it down. Fix those first.
AI Insight	AI-generated analysis of your financial patterns and risks	Click "Generate" to run AI analysis. Review recommendations.
Total Balance	Sum of all bank account balances. This is your current cash position.	If negative or very low, review your Cash & Liquidity page.
Expenses	Total money going OUT in the selected date range (red = debits)	If unexpectedly high, go to Expense Integrity to review by category.
Revenue	Total money coming IN in the selected date range (green = credits)	If lower than expenses, check Revenue Integrity for details.
Match Rate	Percentage of bank transactions successfully matched to bills/invoices	If below 80%, run a Reconciliation to match unmatched items.
Open Alerts	Number of unresolved risk alerts. Shows high + low breakdown.	Go to Risk Monitor to review and resolve each alert.
Data Sources	Number of uploaded files and live integrations (e.g., Odoo)	Upload more bank statements to improve analysis accuracy.

4.3 How to Drill Down Into Details

Every metric card is clickable. Here is how to use drill-down:

1. Click any **metric card** (e.g., "Total Revenue")
2. A **detail sheet** slides open from the right side
3. You will see the **underlying transactions** that make up that number
4. Use the **search bar** to find specific transactions

- 5. Click **X** or click outside to close the sheet

5. How to Reconcile Transactions

5.1 What is Reconciliation?

Reconciliation is the process of **matching your bank transactions to your accounting records** (bills and invoices). It ensures that every transaction in your bank statement has a corresponding entry in your books.

Why is this important? Without reconciliation, you cannot be sure your books are accurate. Errors like missing bills, duplicate payments, or unauthorized charges can go undetected.

5.2 How to Start a Reconciliation

- 1. Click **"Reconciliation"** in the left sidebar
- 2. Click the **"Start Reconciliation"** button
- 3. Select the **date range** you want to reconcile (e.g., October 2025)
- 4. Click **"Run"** — the system will automatically match transactions
- 5. Wait a few seconds — results will appear as a list of items

- How matching works:** EMARA uses a 4-pass algorithm:
- Pass 1: Match expense transactions to bills (by amount + date + vendor name)
 - Pass 2: Match income transactions to invoices (by amount + date + customer)
 - Pass 3: Flag any bank transaction that has no matching bill/invoice
 - Pass 4: Flag any bill/invoice that has no matching bank transaction

5.3 Understanding the Results

Status	Color	What It Means	What To Do
Matched	Green	This transaction matched a bill or invoice	No action needed — it is correct
Missing Bill	Amber	Bank shows payment but no bill exists in books	Create a bill for this payment, or verify it is correct
Missing Invoice	Amber	Bank shows deposit but no invoice exists	Create an invoice, or verify it is a non-invoice income
Amount Mismatch	Red	Bill/invoice exists but amounts do not match	Check if partial payment or data entry error
Duplicate Suspect	Purple	Two very similar transactions found	Verify both are legitimate, or delete the duplicate

Status	Color	What It Means	What To Do
Large Transaction	Red	Amount exceeds your configured threshold	Review and verify this is an authorized transaction

5.4 How to Manually Match an Item

- 1. Click on any **flagged item** (amber or red) to open its detail sheet
- 2. Review the **bank transaction** details (date, amount, description)
- 3. If you know what it matches, click **"Link"** and select the matching bill/invoice
- 4. If the transaction is correct as-is (e.g., a bank fee), click **"Verify"**
- 5. The item status will change to **Matched** or **Verified** (green)

5.5 How to Finalize a Reconciliation

Once all flagged items have been resolved:

- 1. Make sure there are **no remaining flagged items** (all should be green)
- 2. Click the **"Finalize"** button
- 3. The reconciliation is **locked** with your name and timestamp
- 4. The **match rate** is calculated and saved (e.g., 95.2%)

Audit trail: Finalized reconciliations cannot be edited. This creates a permanent record for auditors and compliance purposes.

6. How to Create & Send an Invoice

6.1 What is an Invoice?

An invoice is a document you send to a customer requesting payment for goods or services. In EMARA, invoices are tracked from creation to payment collection.

6.2 Step-by-Step: Creating an Invoice

- 1. Click **"Revenue Integrity"** in the left sidebar
- 2. Click the **"Invoices"** tab
- 3. Click the **" + New Invoice"** button (top right)
- 4. Fill in the **Invoice Details** section:

Field	What To Enter	Example
Customer	Type or select the customer name. If new, type it and it will be created automatically.	Emarabooks LLC
Invoice Number	Auto-generated (INV-YYYYMM-NNN) or type your own custom number.	INV-202603-007
Invoice Date	The date you are issuing the invoice. Defaults to today.	15/03/2026
Due Date	When payment is due. Defaults to 30 days from invoice date.	14/04/2026
Category	The type of service/product. Used for P&L categorization.	Professional Services

- 5. Add **Line Items** — click **" + Add Item"** for each service/product:

Column	What To Enter	Example
Description	What you are billing for	Web Development Services
Qty	Number of units	1
Unit Price	Price per unit (before tax)	3,000
Tax %	Tax rate (default 5% for UAE VAT)	5
Amount	Auto-calculated: Qty x Price x (1+Tax%)	3,150

The **Subtotal**, **Tax**, and **Total** are calculated automatically at the bottom.

- 6. Optionally add **Notes / Payment Terms** (e.g., "Payment due within 30 days")

- 7. Review the **Live Preview** on the right side — this shows exactly how the invoice will look
- 8. Click **"Save Draft"** to save without sending, or **"Update & Send"** to save and mark as sent

Tip: Before your first invoice, click **"Invoice Profile"** to set up your company name, address, phone, email, TRN, and logo. This information appears on every invoice.

6.3 How to Customize Invoice Appearance

- 1. On the invoice form page, click **"Customize"** (top right)
- 2. Choose a **Layout**: Classic (traditional), Modern (clean), or Minimal (simple)
- 3. Pick an **Accent Color** from the color palette (matches your brand)
- 4. Edit the **Footer Text** (e.g., "Thank you for your business!")
- 5. Toggle visibility: Logo, TRN, Due Date, Notes, Payment Terms
- 6. Click **"Save"** — these settings apply to all future invoices

6.4 Invoice Status Lifecycle

Status	Meaning	How To Change
Draft	Saved but not sent to customer	Click "Update & Send" to mark as Sent
Sent	Sent to customer, awaiting payment	When paid, change status to Paid
Paid	Customer has paid in full	Set when payment received
Overdue	Past due date and still unpaid	Auto-detected. Follow up with customer.
Cancelled	Invoice voided / no longer valid	Use for refunds or errors

7. How to Create & Manage Bills

7.1 What is a Bill?

A bill is an invoice you **received from a vendor** — money you owe to someone. Bills track your payables (accounts payable / AP).

Bills vs Invoices: Invoices = money owed TO you (from customers). Bills = money you OWE (to vendors). Both are created automatically when you upload a bank statement, but you can also create them manually.

7.2 Step-by-Step: Creating a Bill

- 1. Click **"Expense Integrity"** in the left sidebar
- 2. Click the **"Bills"** tab
- 3. Click **"+ New Bill"**
- 4. Fill in the form:

Field	What To Enter	Example
Vendor	Type vendor name (auto-creates if new)	Etisalat
Bill Number	The number on the vendor's invoice	ETI-2026-0042
Bill Date	Date on the vendor invoice	01/03/2026
Due Date	When you need to pay	31/03/2026
Amount	Total amount you owe	1,573.32
Category	Expense type	Utilities
Notes	Any additional details (optional)	Monthly telecom bill

- 5. Click **"Save"**

Tip: Bills from your bank statement are created automatically with status "Paid" (since the bank already shows the payment). Manual bills start as "Pending" until you mark them paid.

8. Managing Customers & Vendors

8.1 How Customers and Vendors are Created

EMARA creates customers and vendors automatically in two ways:

- **From bank statements:** Each unique payee (money out) becomes a vendor. Each unique payer (money in) becomes a customer.
- **From invoices/bills:** When you create an invoice with a new customer name, or a bill with a new vendor name, the record is created automatically.

8.2 Viewing Customers

1. Go to **Revenue Integrity** → **Customers** tab
2. You will see a list of all customers with: Name, Total Revenue, Invoice Count, Payment Status
3. Click a customer to see their full profile: contact info, invoice history, payment timeline

8.3 Viewing Vendors

1. Go to **Expense Integrity** → **Vendors** tab
2. You will see all vendors with: Name, Total Spend, Bill Count, Outstanding Balance
3. Click a vendor to see their full profile and bill history

8.4 How to Add a Customer or Vendor Manually

The easiest way is to create an invoice (for customer) or bill (for vendor) — the record is auto-created. But you can also:

1. Go to the **Customers** or **Vendors** tab
2. Click **" + Add Customer "** or **" + Add Vendor "**
3. Enter: Name, Email (optional), Phone (optional), TRN (optional)
4. Click **"Save"**

9. Tracking Cash & Liquidity

9.1 Cash Overview

Go to **Cash & Liquidity** in the sidebar. The overview shows:

- **Total Cash Balance** — combined across all your bank accounts
- **Cash Flow chart** — daily/weekly/monthly trend of your balance
- **Inflow vs Outflow** — visual comparison of money in vs money out

9.2 How to View All Transactions

1. Go to **Cash & Liquidity** → **Transactions** tab
2. You will see every transaction from all uploaded statements
3. Use **Search** to find specific transactions by description
4. Use **Filters** to narrow by: category, amount range, type (deposit/withdrawal)
5. Click any transaction to see full details, category, and matched bill/invoice

9.3 The Cash Ledger

The **Ledger** tab shows an accounting-style view with Debit and Credit columns and a running balance. This is the format accountants use for bookkeeping.

Column	Meaning
Date	Transaction date
Description	What the transaction was for
Account	Category assigned (e.g., Food & Beverage, Transportation)
Debit	Money going out (expenses)
Credit	Money coming in (income)
Balance	Running balance after this transaction

10. Generating Financial Reports

10.1 Profit & Loss (P&L;) Statement

What it is: A P&L; shows how much money your business made (revenue) vs how much it spent (expenses) during a specific period. The difference is your **Net Income** (profit or loss).

How to generate a P&L;:

- 1. Go to **Financial Reports** → **Profit & Loss** tab
- 2. Select a **period** using the dropdown: This Month, This Quarter, This Year, or Custom
- 3. The P&L; table shows: Revenue by category, Expenses by category, Net Income
- 4. The "**vs Previous**" column shows how each category changed from the prior period
- 5. Click any **category row** to drill down into the specific transactions

What is excluded from P&L;: Internal transfers (MOBN, IBFT), ATM withdrawals, banking fees, and cash deposits are automatically excluded because they are not business income or expenses — they are just cash movements.

10.2 Balance Sheet

What it is: A Balance Sheet shows what your business owns (Assets), what it owes (Liabilities), and the residual value (Equity) at a point in time.

Section	What It Includes	Example
Assets	Cash + money owed to you (receivables)	Bank balance + unpaid invoices
Liabilities	Money you owe to others (payables)	Unpaid bills + loans
Equity	Assets minus Liabilities (net worth)	Your business net worth

Tip: For a detailed Balance Sheet, set up your **Chart of Accounts** in Control Settings. Without it, EMARA shows a simplified summary.

10.3 Cash Flow Statement

What it is: Shows where your cash came from and where it went, organized into three categories:

- **Operating:** Day-to-day business (customer payments, vendor payments, salaries)
- **Investing:** Buying/selling equipment, assets, investments
- **Financing:** Loans, owner contributions, distributions

10.4 Financial Ratios

Ratios help you understand your business health at a glance:

Ratio	What It Tells You	Good Range
Net Profit Margin	How much profit per AED of revenue	Above 10-15%
Current Ratio	Can you pay short-term debts?	Above 1.5
DSO (Days Sales Outstanding)	How many days to collect payment from customers	Below 30-45 days
Revenue Growth	Is your revenue increasing or decreasing vs last period?	Positive %

11. How to Connect Odoo ERP

11.1 What is Odoo Integration?

If you use Odoo as your ERP system, you can connect it to EMARA to automatically import your customers, vendors, invoices, and bills. This saves time and keeps your data in sync.

11.2 Step-by-Step: Connecting Odoo

1. Go to **Integrations** → **ERP** tab
2. Find the **"Odoo"** card and click **"Connect"**
3. A dialog will open. Fill in your credentials:

Field	Where To Find It	Example
Server URL	Your Odoo web address. Just the domain — do NOT add /web or /odoo at the end.	https://mycompany.odoo.com
Database	Your Odoo database name. Auto-detected from URL for *.odoo.com domains.	mycompany
Username	The email you use to log into Odoo.	admin@company.com
Password	Your Odoo login password. Required for all Odoo plans.	
API Key (Optional)	From Odoo → Profile → Account Security → API Keys. Only needed for custom plans.	

4. Click **"Connect"** — the system will verify your credentials
5. If successful, the card will show **"Connected"** with a green badge

Connection troubleshooting:

- "Cannot reach server" → Check your Server URL is correct
- "Authentication failed" → Verify username and password are correct
- "Database not found" → Check the database name (usually your subdomain)

11.3 Step-by-Step: Importing Data from Odoo

1. After connecting, click **"Sync Data"** on the Odoo card
2. A dialog shows 8 entity types with Import/Export buttons
3. Click **"Import"** next to each type you want:

Entity	What Gets Imported	Odoo Source
Customers	Customer names, emails, phones, TRN	res.partner (customer_rank > 0)
Vendors	Vendor names, emails, phones, TRN	res.partner (supplier_rank > 0)
Invoices (Sales)	Sales invoices with amounts, dates	account.move (out_invoice)
Bills (Purchases)	Purchase bills with amounts, dates	account.move (in_invoice)

4. A toast will show how many records were imported (e.g., "Imported bills successfully (2 records)")
5. Scroll down to see the **"Imported ERP Data"** section with counts and tables

Tip: You can re-import at any time. The system detects duplicates and updates existing records instead of creating new ones.

11.4 How to Disconnect Odoo

1. On the Odoo card, click **"Disconnect"**
2. The connection is removed. Previously imported data remains in EMARA.

12. Understanding Risk Alerts

12.1 What are Risk Alerts?

EMARA automatically monitors your financial data and creates alerts when it detects something that needs your attention. Think of alerts as your **financial early warning system**.

12.2 Types of Alerts and What To Do

Alert Type	What It Means	How To Resolve
Reconciliation Flag	A bank transaction could not be matched to a bill or invoice	Go to Reconciliation. Manually match or verify the flagged item.
Overdue Invoice	A customer has not paid their invoice by the due date	Contact the customer. Send a payment reminder. Update status when paid.
Overdue Bill	You have not paid a vendor bill by the due date	Pay the vendor. Update the bill status to "Paid".
Anomaly (Spike/Drop)	Spending in a category is significantly higher or lower than usual	Review the category transactions. Verify the change is expected.
Large Transaction	A single transaction exceeds your configured threshold (default 50K)	Verify the transaction is authorized and correctly categorized.
Duplicate Suspect	Two transactions look very similar (same amount, close dates)	Check if both are legitimate or if one is a duplicate.

12.3 How to Review and Resolve Alerts

1. Go to **Risk Monitor** in the sidebar
2. The overview shows total open alerts by severity (Critical, High, Medium, Low)
3. Click the **"Alerts"** tab to see all alerts in a list
4. Click any alert to see full details and recommended action
5. Take the recommended action (e.g., match the transaction, contact the customer)
6. Click **"Resolve"** to close the alert

Tip: Check Risk Monitor weekly. Aim to keep open alerts below 10 for a healthy risk score.

13. Configuring Settings

13.1 How to Set Up Chart of Accounts

The Chart of Accounts (CoA) is the backbone of your accounting. It defines all the account categories your business uses.

- 1. Go to **Control Settings** → **Chart of Accounts** tab
- 2. Click **"Use Industry Template"** to auto-populate based on your business type
- 3. Or click **"+ Add Account"** to create accounts manually:

Field	What To Enter	Example
Account Code	Numeric code for the account	1100
Account Name	Descriptive name	Cash in Bank
Account Type	Asset, Liability, Equity, Revenue, or Expense	Asset

- 4. Click **"Save"** — the account appears in your CoA list

13.2 How to Configure Alert Thresholds

- 1. Go to **Control Settings** → **Thresholds** tab
- 2. Adjust the values:

Setting	Default	What It Controls
Large Transaction	50,000 AED	Transactions above this trigger a "Large Transaction" alert
Overdue Invoice	30 days	Invoices unpaid after this many days trigger an alert
Overdue Bill	30 days	Bills unpaid after this many days trigger an alert
Variance Threshold	50%	Spending changes above this % trigger an anomaly alert

- 3. Click **"Save"** — new thresholds apply to future alert detection

13.3 How to Create Matching Rules

Matching rules tell the reconciliation engine how to automatically match specific transactions:

- 1. Go to **Control Settings** → **Matching Rules** tab
- 2. Click **"+ Create Rule"**
- 3. Enter: **Rule Name** (e.g., "DEWA Monthly"), **Pattern** (e.g., "DEWA"), **Category** (e.g., "Utilities")
- 4. Click **"Save"** — this rule will auto-match future DEWA transactions during reconciliation

14. Frequently Asked Questions

Q: I uploaded a statement but the transaction count seems wrong. What should I do?

A: The system parses every row with a date and amount. Rows like "Opening Balance", "Closing Balance", and "Total" are automatically skipped. If the count is still wrong, try downloading the statement in Excel format (instead of PDF) for more accurate parsing.

Q: How do I know if my bank statement was parsed correctly?

A: After upload, check the **Total Balance** on the dashboard. It should match your bank's closing balance. Also check Revenue + Expenses — they should match total credits + debits. You can verify individual transactions in Cash & Liquidity → Transactions.

Q: Can I upload statements from different banks?

A: Yes! Upload statements from any bank. Each file is tracked separately. The system combines all transactions into a unified view.

Q: What if a transaction is in the wrong category?

A: Click the transaction in Cash & Liquidity → Transactions. You can change its category. The system learns from your corrections over time.

Q: How does the AI categorization work?

A: EMARA recognizes 500+ merchant names (e.g., "ADNOC" → Transportation, "Carrefour" → Food & Beverage, "Netflix" → Entertainment). For unknown merchants, it uses pattern matching and AI to guess the category.

Q: Can multiple people use the same account?

A: Multi-user support with roles (Admin, Manager, Accountant, Viewer) is planned for a future release. Currently, one login per organization.

Q: How is UAE VAT handled?

A: UAE VAT is 5%. When creating invoices, enter the total amount — the system automatically calculates: $\text{Subtotal} = \text{Total} / 1.05$, $\text{VAT} = \text{Total} - \text{Subtotal}$. VAT is shown separately on the invoice preview.

Q: What happens to my data if I disconnect Odoo?

A: Previously imported data (invoices, bills, customers, vendors) remains in EMARA. Only the connection is removed. You can reconnect at any time and re-sync.

Q: How secure is my financial data?

A: All data is encrypted in transit (HTTPS/TLS). Authentication uses industry-standard JWT tokens via Supabase Auth. The backend enforces rate limiting (200 requests/hour) and API key authentication. Your data is stored in PostgreSQL with row-level access control.

Q: Can I export my data?

A: Yes. Most tables have a "Download CSV" or export option. Financial reports can be downloaded. The Cash Ledger can be exported for your accountant.

Q: What does "Data Sources: 4 files, 1 live" mean?

A: "4 files" = 4 bank statements uploaded. "1 live" = 1 active ERP integration (e.g., Odoo connected). More data sources = more accurate analysis.

Q: How often should I upload new statements?

A: We recommend uploading monthly, right after your bank issues the statement. This keeps your data current and your risk score accurate.
